

Complicated Leg Ulcer

- Female aged 80 years
- Severe rheumatoid arthritis and refractory venous leg ulcer for several years. Ulcer was operated twice and treated continually with various topical wound care products without success (Figure 1)
- Abilar 10% Resin Salve treatment was initiated in August 2011 and salve was applied once a day
- After 3 months, signs of small epithelialized islets can be seen (Figure 2)
- The ulcer was completely healed after 7 months of Abilar 10% Resin Salve treatment (Figure 3)
