

Traumatic Wound

- A boy aged 15 years
- Infected skin and soft-tissue defect on Achilles tendon after mechanical trauma caused by dirty sewer in October 2011
- Unsuccessful topical treatment for 3 weeks (Figure 1)
- Abilar 10% Resin Salve treatment was initiated in November 2011 and salve was applied once a day
- The wound was well healed after 40 days of Abilar 10% Resin Salve treatment (Figure 2) and eventually wound closure was complete
